DETAILED ACTION

1. Acknowledgment is made of applicants' preliminary amendment filed 19 July 2004.

Priority

2. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Specification

3. The disclosure is objected to because of the following informalities:

Page 2, line 19: The term "Fgure" should be corrected to read -- Figure --.

Page 8, line 33: The phrase "first inductance L_2 " should be corrected to read either -- first inductance L_1 -- or -- second inductance L_2 --. Appropriate correction is required.

Claim Rejections - 35 USC § 112

4. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

5. Claims 9-16 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Re claim 9, claim lines 1-8: Applicants recite a device for measuring viscosity and/or density of a fluid in the preamble; however, the claim fails to recite structure/means that formulate an output signal that is representative of the viscosity and/or density of the fluid. Only a resonator and an oscillator circuit are provided, which could be used to measure other fluid characteristics or no characteristics at all.

Claim Rejections - 35 USC § 102

6. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

7. Claim 9 is rejected under 35 U.S.C. 102(b) as being anticipated by US 5,054,313 (Fitzgerald et al.).

With respect to the limitations of claim 9, the reference to Fitzgerald et al. discloses a resonator/mechanical oscillator element (11) in contact with a fluid; and an oscillation amplitude control circuitry comprising a first/primary oscillator/feedback loop (I) and a secondary feedback loop (II). The oscillator element (11) is used to determine the viscosity and density of the fluid being measured.

Allowable Subject Matter

8. The following is a statement of reasons for the indication of allowable subject matter:

Prior art was not relied upon to reject claims 10-16 because the prior art fails to teach and/or make obvious the following limitations:

Claim 10: Providing a resonator with a first feedback network and a correction capacitance with a second feedback network in combination with all of the remaining limitations of the claim and all of the limitations of the base claim.

Claims 11-16: Providing an amplifier having a first input, wherein a difference of an output of a first feedback network and an output of a second feedback network is supplied to the first input of the amplifier in combination with all of the limitations of the base claim.

Conclusion
